PROJECT REQUIREMENTS

Project Name	Interactive Map Of Canada
Date Produced	October 16, 2022
Project Goals	The main objective of this project is to design an interactive map of Canada in such a way that it lists out interesting facts, new technologies, travel destinations with a quick glance of everything you need to know about that province.
Functional Requirements	● Designing a user-friendly website. ● Should act as a guide to travellers and tourists. ● Should list out various facts about a province. ● Information should be regularly updated. ● Bunch of icons to attract users and navigations to surf through the pages. ● Responsive cards (Grid Layout) to list out best places to hike/ places to visit in Canada. ● Proper database to store the updates and information from the users. ● Should list out the FAQs to help new users.
Technical/ Performance Requirements	● First technical requirement is to use HTML, CSS and Bootstrap to create a healthy and attractive user interface. ● JavaScript (Node.js) for client side validation and to add interactivity to HTML pages. ● MySQL and MongoDB to take the information from users which helps us to know useful information to update the website on regular basis.
